Abbie Lathrop (1868-1918) Papers

Title: The Abbie Lathrop Collection.

Dates: 1907-1918.

Accession Number & Location: Manuscript boxes # 9-11; Oversize folder, Box 6B, F8; .5 cu.ft.

Arrangement: In one series. The collection is very fragile, with numerous small pieces of paper clipped onto other sheets.

Biography: Abbie Lathrop was born in Illinois in 1868. Her parents were school teachers from Granby, Massachusetts, the town she returned to in 1900 when she gave up teaching and began raising animals for sale as pets. Her business expanded rapidly as she began to receive orders from research laboratories across the country, including nearby Bussey Laboratory at Harvard University. Her concern about the occurrence of mouse tumors brought her into contact with Leo Loeb of the University of Pennsylvania. They jointly produced ten papers on the subject of tumors. Lathrop died of complications from pernicious anemia at the age of 50 in 1918. (See biographical references in Origins of Inbred Mice, Biology of the Laboratory Mouse, and an article by Shimkin in Cancer Research.)

Scope and Content: The majority of the collection consists of nineteen notebooks containing mouse breeding records from 1907-1918. A thirteen page manuscript entitled “Comments” reveals Lathrop’s observations on various breeds; and correspondence to Jas. B. Murphy in 1915 contains a list of her breeding stock at that time. There are reprints of two of the articles Lathrop published with Leo Loeb in 1913. One hand-written letter to Miss Lathrop, 1915 and unsigned, may be assumed to be from Loeb.
